

RADIAL NATURAL EDGE WEATHERBOARDS

Radial Timber Natural Edge Weatherboards are a sustainable option that can be used to create many different styles for your project. Using the Natural Edge Weatherboards provides a unique style and practicality to blend in with its natural surroundings.

Supplied unseasoned and transported to site in log form with the ends uncut, this radially sawn product is produced to provide stable quarter sawn boards with minimal waste making for a very sustainable option.

Weatherboards vary in cover and profile as they reflect the natural curves of each log which gives every log its unique pattern. Logs are available in a range of lengths from 3.6m-5.4m with each log ranging from 15-25m² of board coverage.

Radial Timber Natural Edge Weatherboards are an eco-friendly option to provide a natural cladding solution for external and internal use or as a timber feature wall.

Radial Timber Natural Edge Weatherboards can be used in Bushfire prone areas up to BAL 29 depending on the species.

Design: Zen Architects
Construction: R&B Kahle

We currently only supply sustainably sourced Regrowth Hardwoods or plantation grown timber. Our goal is to become fully self sufficient from our privately owned plantation resource once they mature and become available. Radial Timber has been privately planting plantations since 2004.

Radial Timber is committed to environmentally responsible timber production. Our timber is radially sawn locally using unique sawing methods which give us up to 40% more yield from younger, less desired saw logs than traditional sawing methods

Product Specification

SPECIES: Range of Class 1 and Class 2 durability Australian Hardwoods (Ask for species on request)

FINISH: Rough sawn and unseasoned (green)

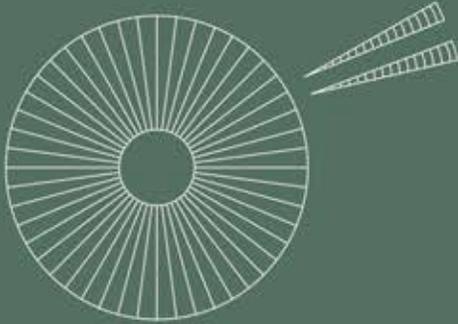

COVER SIZE: Varied from 100-170mm

M2 PER LOG: Range from 15m²-25m²

BOARD LENGTH: Random lengths (3.0m-5.4m)

GRADE: Visually Graded

Cross section cut of log

Installation layout
